

evopark and EasyPark expand cooperation in Europe

Digital access to 89 parking garages in 36 German cities

Cologne/Stockholm, April 19, 2021 – EasyPark Group, an internationally operating mobility provider, and evopark, a leading SaaS parking solution provider, are expanding their partnership to create new contactless parking and payment options in parking garages. As in Finland and the Netherlands, where numerous parking garages have already been connected to evopark's vendor-independent mobility CONNECT platform in 2020, the cooperation between the companies now enables the service in Germany as well. For EasyPark users, this means that in the future they will have ticketless, cashless, and contactless access to 89 parking garages in 36 cities - for example in Cologne, Duesseldorf, Munich, Berlin, Stuttgart and Hanover.

Drivers have two options: Either they identify themselves at the entrance with the EasyCard (with RFID chip) or via their license plate.

- The EasyCard is automatically recognized in the vehicle and the barrier opens. As soon as the car leaves the parking garage, the parking time stops and the parking fee is billed via the EasyPark app. Users can access details about parking transactions in the app at any time.
- Several parking garages already have automatic license plate recognition via camera ("CameraPark"). The one-time setup only takes a few minutes in the app. Here, as well, the parking time is automatically recorded and billed via the EasyPark app.

More information about these options can be found at: www.easypark-garagenparken.de

Expansion of digital parking facilities

"We are excited to expand our partnership with evopark/Scheidt & Bachmann. In Germany, digital parking solutions are more in demand than ever. Now is the time to set trends together," says Nico Schlegel, Managing Director of EasyPark GmbH. "With the connection to mobility CONNECT, we can offer our customers many new parking options." Henk de Bruin, Managing Director of evopark, adds, "We are joining our expertise and can thus decisively advance the digital offering nationwide. Particularly in the otherwise highly fragmented parking market, this is an enormous advantage, both for mobility CONNECT's partners and for its users."

About evopark:

evopark is a German company, based in Cologne. It was founded in 2014 as a start-up with the aim to significantly simplify parking for motorists. Today evopark is renowned as the digital pioneer in the German parking industry and focuses on digital end-to-end products for parking operators and mobility providers. evopark has developed various digital parking solutions for B2B partners such as Daimler or Porsche. The solutions help to increase the online visibility and attractiveness of car park offers for the end customer. They support operators in digitizing their paper-based processes, enabling them to offer new innovative parking services and help to improve the efficient occupancy of car parks and thus result in a reduced traffic searching for parking. Mobility providers use the platform mobility CONNECT to offer their customers digital, innovative parking services. Since 2018 evopark belongs to the Scheidt & Bachmann Group, an internationally operating system house and leading supplier of parking solutions, systems for fare collection, systems for fuel stations and systems for signalling technology. Jointly, the companies offer digital solutions that cover the entire customer journey of parking.

About EasyPark

EasyPark is a fast-growing European mobility service provider that facilitates parking and charging of electric vehicles - in more than 20 countries and 2,200 cities. With the award-winning EasyPark app, users save time and often money when looking for a parking space and during the parking process. With state-of-the-art applications, EasyPark also supports companies, cities and parking operators in the administration, planning and management of parking garages and parking lots. In short: We simplify urban life, parking lot by parking lot.
